

ALKALINE ELECTROCHEMICAL CELL HAVING A NON-CRIMPED CLOSURE

ABSTRACT OF THE DISCLOSURE

An adhesive closure for sealing closed the open end of an electrochemical cell container.

The electrochemical cell comprises a can having an open end and a side wall, and positive and
5 negative electrodes disposed in the can. The cell also has a cover disposed on the open end of the
can and having a peripheral wall radially outside of the side wall of the can. One or more adhesives
are disposed between the outer side wall of the can and the peripheral wall of the cover for adhering
the cover to the can.
